

# SA legend (5, 40 & 60)

User guide in English

vers. 2.eng

**Follow the instructions and get the best results with  
your new SA legend speakers**

## Welcome

Thank you for choosing SA.

System Audio will delight as many people as possible with the best sound possible.

A set of SA loudspeakers will create a feeling of being close to the artists.

An SA home theatre will place the audience deeper into the action.

To achieve the best results, we recommend you to carefully read this manual before connecting your new SA loudspeakers.

1 x manual  
8 x Aluminium pieces (for feet)  
16 x screws  
8 x rubber feet  
8 x spikes  
8 x spikes pads  
8 x aluminium top  
(2 boxes)

## Good to know about your new speakers

### **Check the serial number**

The serial number is on a label on the back of the speaker.

We recommend you to note down the serial number on your invoice and insurance policy.

Please contact your dealer if the serial number is not mentioned on the loudspeakers.

### **Warranty**

System Audio A/S gives a 2 year warranty against manufacturing defects. This warranty does not cover misuse. Repairs and service must be carried out by the dealer or associated service facilities. Changes in the design will void your warranty.

Use SA's offer of a free 7-year warranty and register your speaker on our website (under customer service).

### **Run the new loudspeakers at reasonable volume**

All SA loudspeakers must be run at a reasonable volume for a certain period. This is because SA uses woofers with a long stroke and therefore, this will be required for a period of several days. The sound quality will gradually increase throughout the period.

### **New technology to fill the room with sound**

A new feature of SA legend is the special DXT-lens around the tweeter.

The patented design makes the living-room better filled with sound. The advantages of DXT are obvious. Try to walk around the room and enjoy the music from every corner.

### Installation - compact loudspeakers

There is a wall bracket for SA legend 5 see page 4.

SA legend 5 can also be placed directly in a bookcase. For the best sound quality, ensure free air passage for the reflex port on the back part. Ensure min. 5 cm free space behind the loudspeaker and one on the side of the loudspeaker.

SA legend can also be placed on a speaker stand see page 4

### Installation - floorstanding speakers

SA legend (40 & 60) are designed to stand on the floor. The speakers must be placed at a distance of 20 – 40 cm in front of a wall. The distance can be increased or reduced, depending on the sound you want. After the period when the speakers must be run at a reasonable low volume, the speakers may be installed on the rubber pads or spikes.

**Rubber feet.** Rubber feet are used provided the speaker is placed on a surface, for example, a wooden floor.

**Spikes.** We recommend you to use spikes provided the speakers are placed on a soft base, for example, a carpet. It is important to place the speakers vertically and not to move them. Adjust the spikes and counter-nuts in order to ensure that the speakers are placed evenly on all 4 spikes. Tighten the nuts when you are done with the adjustments.

We recommend you to use the rubber

pads or spikes only after the appropriate location is found in order to make the installation and set-up easier.

### Mounting of feet

Place the speaker with the top down and mount the alu pieces:

Install rubber feet or spikes like this: Turn the speaker with the top up, and

mount the alu tops on the spikes or rubber feet.

### Example of setup

The sound from the loudspeakers is greatly depending on the setup of the loudspeaker.

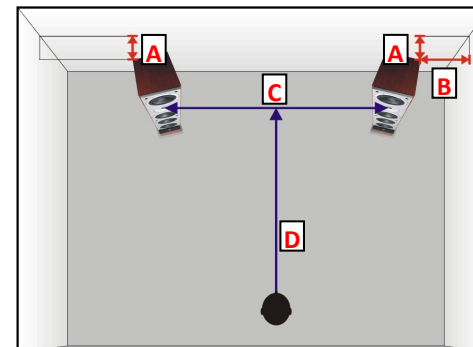

Here are some general advice.

### A

**The distance between the loudspeakers and the wall behind them.**

Start with a distance of 20 cm from the floorstanding speaker.

The distance has to be the same for both speakers. Try with some music you know and find out what distance

gives the best sound in your home.

**Greater distance** = weaker bass, more precise bass, better precision/ impact and greater perspective.

**Shorter distance** = louder and softer bass, smaller sound perspective.

### B

**The distance from the side walls to the loudspeakers.**

Preferably greater than the distance to the back wall

A short distance to the side walls increases the bass in the same way as A.

### C,D

**The distance between the loudspeakers and the listening position.**

The ideal distance is 2,5 - 3 m.

Distances C & D must be the same.

The loudspeakers must be placed in a mutual angle of about 15°. This means that you can only see the inside of both loudspeakers.

## How to get our 7 year factory warranty

**Register your product on [www.system-audio.com](http://www.system-audio.com) to get a free 7 year factory warranty.**

The factory warranty covers returning the item to the nearest dealer, and does not include collection and delivery.

The warranty covers manufacturing defects and includes parts and labour. The warranty does not cover wear and tear, misuse, incorrect connection, damage during transport resulting from poor packaging, professional use, inadequate maintenance or if modifications have been made to the product.

The warranty is only valid on presentation of proof of purchase with information about the model and the serial number.
