

powerful multi speaker

SA220AV i beech finish

SA220AV is built on System Audio's know-how of designing compact loudspeakers with big sound. SA220AV is designed for both 2-channel HiFi and multi-channel Home Theatre.

SA220AV is placing itself right between the SA210AV and the high end center channel speaker, 70AV. It has even borrowed a little from both of them.

multi purpose

It has been developed to meet the highest demand for a loudspeaker: reproduction of music in 2-channels with pure, dynamic and "live" sound. The sound quality is surprisingly BIG compared to the compact size of the speaker. Its fully magnetic shielding and the possibility of mounting the System Audio logo horizontally on the front grille, makes the SA220AV a powerful center channel speaker for a demanding Home Theatre set-up.

A system of five pieces of SA220AV shows with great confidence the concept of having five completely identical speakers in a Home Theatre. If you want the same sound quality coming out of five (or six, or seven!) different channels - how about using identical speakers in the first place?

SA220AV is able to handle a lot of power, which makes it useful in a café, restaurant, fitness centre or professional recording studios etc..

almost complete freedom of placement

Compact dimensions takes the SA220AV almost anywhere: standing or lying. It has been prepared to be used together with System Audio wall brackets (WB1), ceiling brackets (CB1) or floor stand (FS1). Placing a loudspeaker could hardly be easier ...

technical specifications

power handling: 150 Watts
frequency response (+/- 3 dB): 43-35.000 Hz
impedance: 8 ohms (easy load)
sensitivity: 89 dB
biwiring: yes
dimensions (WxHxD) cm: 15x43x25.6 (standing)
Woofer: 2 x System Audio W1404AV
Tweeter: System Audio T2504AV
Finish: Black ash, Cherry or Beech
