

floor standing speaker SA aura 60

floor standing loudspeaker SA aura 60:

SA aura 60. An invitation to come closer to the artists you like.

energy and finesse to your music

SA aura 60 fulfills the dream of a speaker which is both a piece of furniture in wonderful build quality and a music provider that brings you close to the artists you love.

It is not built like an ordinary loudspeaker because that is not the intention at SA. Instead of one large woofer, we use several smaller ones, because it offers the accuracy and live sound that characterizes SA. Sound quality is one of the differences between SA and other brands.

a difference everyone can hear

SA aura 60 represents a fresh and different approach to your experience of sound. Our idea is to bring you closer to the artists you love. You must have a feeling of being close to the music. Therefore we work with technologies, materials and methods that gives you this experience, whether you listen to pop, rock, classical or jazz or if you use the speakers in a home theatre where they are used for reproduction of the movie soundtrack. The difference can be heard by everyone and does not require expert knowledge. SA aura 60 is not just a loudspeaker.

It is an invitation.

can be used with almost all electronics

SA aura 60 makes no specific requirements to give you good sound. The amplifier must only be of good quality and power output of 50 watts or more.

SA aura 60 is available in five different finishes: white satin, ebony, black ash, cherry and maple. All wood finishes are real wood and the speakers are delivered in matched pairs.
