

expect the unexpected

big sound from an unusual and slim loudspeaker

System Audio SA1230 has the ability to surprise. You look at a compact loudspeaker that is only 13cm wide (the same width as a CD), but you hear a big and clean sound, with lots of dynamics. SA1230 can be used for both music and home theatre system.

SA1230 is easier to place in the living room than any other quality loudspeaker. The simple design and the slim shape makes it fit in anywhere. And the magnetic shielding allows the loudspeaker to stand close to a TV. One is easily mistaken by its compact size, but SA1230 is a surprisingly powerful and precise loudspeaker, which can be used for all kinds of music and home theatre systems.

technical description

- Extremely fast drive units with lightweight membranes
