

System Audio 70AV make your own quality home theatre

System Audio 70AV

System Audio 70AV is a high-quality centre channel speaker that matches the sound from the 70 series loudspeakers. Use it in a home theatre system where you have spent a lot of care on the quality and enjoy the fine nuances and the powerful reproduction. 70AV can be placed over and under your TV, or be mounted on the wall with the WB1 brackets or hang down from the ceiling with the CB1 brackets.

music requires more than movies

It might sound paradoxical, but 70AV was developed to reproduce music. At System Audio we imagine that the best home theatre system should also be made for music. Not only because there is a lot of very good music in many movies, but also because it is natural to have a combined music – and home theatre system. The requirements of a loudspeaker are much larger for music than for movies. Many requirements are the same, but they are larger as to music because everybody knows how real music sounds. Not everyone can judge whether the sound from a movie is real or not, because not everybody has heard the sounds that are used in movies in real life. Many sounds are even created artificially. Developing 70AV by means of music has turned out to be an interesting advantage because this has created a more sophisticated sound than you are used to from centre channel speakers.

You can have better sound at home than you have ever heard at the theatre

music is an important part of a movie experience

extra clean sound

A great deal of the time a centre channel speaker should only concentrate on reproducing the sound of dialogues i.e. voices. Many music forms also use the voice as the mainstay, which requires a clean reproduction. Music, however, has together with the voice many other instruments that should be reproduced naturally too, and this just increases the complexity of the loudspeaker. That is one of the reasons why a centre channel speaker, or any loudspeaker in a home theatre system, that is developed to reproduce music, always will live up to the requirements of a home theatre system.

technical description

- Extremely fast drive units with lightweight membranes
- Mechanically stable cabinet construction
- Efficient magnetic shielding
- 2-way design
- Optional bi-wiring and bi-amping

technical specifications

Power handling: 125 Watt
Impedance: 4 Ohm (easy load)
Frequency response (+/- 1.5 dB): 40-25.000 Hz
Sensitivity (1W, 1m): 89dB
Crossover frequency: 3000 Hz (24 dB/oct. Linkwitz/Riley)
Dimensions (WxHxD) cm: 55x15x24.3
Woofers: 2 x System Audio BIG 1400AV
Tweeter: System Audio T1908AV
Finish: Maple, Cherry or Black Ash (real wood)
